

Jianhua Chen (Catherine)

Senior Product Manager | 0-to-1 Products | Growth | Applied AI | B2B SaaS

PROFESSIONAL SUMMARY

- Senior Product Manager — 7+ years building 0-to-1 products, growth systems, data products and applied AI across consumer and B2B platforms.
- At Baidu (£2M+ daily GMV live commerce): built the merchant operating platform and Data Compass analytics **0-to-1** — onboarding 72h to under a minute, monthly active merchants **+116%**, 90%+ adoption — and drove **+12.5% CVR** and **+6.8% GMV** through 12 A/B tests over six weeks.
- Independent AI product builder since 2024 — four AI prototypes shipped end-to-end, from recommendation to LLM workflows and multimodal generation.

CORE SKILLS

Product Management: Product strategy and roadmap | platform capability building | prioritisation | 0-to-1 launch | experimentation | metrics ownership | stakeholder alignment

Commerce and Platform Products: E-commerce conversion | live commerce | seller and creator tools | marketing capabilities | analytics products | governance workflows | B2B SaaS

AI and Data Products: AI workflow design | LLM products | recommendation systems | RAG | GenAI content workflows | ML classification | evaluation loops | human-in-the-loop review

PROFESSIONAL EXPERIENCE

Independent Product Builder

2024 - Present

Independent - Manchester, UK

Scope: Relocated to the UK and ran end-to-end product exploration around a single thesis - memory, AI personhood and life trade-offs - shipping AI-native prototypes across consumer and B2B use cases as sole product owner.

- Took multiple AI product bets from discovery to working prototype (Parallel Life, FitCue, Cherish, AI Storybook, GiftWise), owning problem framing, positioning, validation and build with modern LLM and agentic tooling - without an engineering team.
- Made evidence-based cut and pivot decisions rather than accumulating features: killed Cherish after 12 user interviews when the signal did not hold, and carried the memory-decision thesis into Parallel Life to lower user-trust and regulatory burden while preserving the core AI simulation engine.

Senior Product Manager

May 2021 - Aug 2024

Baidu Times Network Technology (Beijing) - MEG E-Commerce Division

Scope: Owned broad product initiatives across Baidu's e-commerce and live-commerce platform, covering conversion growth, analytics, B2B SaaS modules, marketing capabilities, seller/creator enablement, governance workflows and selective AI automation.

- Turned a live-commerce conversion plateau into a programme of 12 isolated, independently-attributed A/B experiments over six weeks, delivering a durable +12.5% CVR and +6.8% GMV against a stable baseline, and securing central algorithm-team capacity to ship it.
- Built Data Compass, a real-time analytics product with 110+ dimensions, turning traffic, content, product and transaction data into operational decision support, reaching 90%+ adoption and 95%+ retention among active broadcasters and operators.
- Built from 0-to-1 a merchant- and creator-facing live-commerce SaaS control centre unifying account, product, content and marketing workflows on a £2M+ daily GMV platform — collapsing broadcaster onboarding from 72 hours to under a minute and growing monthly active merchants +116%.
- Rebuilt seller operational tooling, increasing CPS product-attach efficiency ~20x and cutting broadcaster-grading turnaround from 14 days to under 10 seconds, enabling rule-based incentive operations at scale.
- Designed marketing capability products including Exclusive Price and Flash Purchase, balancing campaign rules, user experience and engineering constraints; reached 32% weekly feature usage and £24M GMV uplift within six weeks of launch.
- Built platform governance and quality-control workflows for merchant/product content, combining rules, review loops and selective ML automation to improve catalogue quality, achieve 98%+ accuracy on product-category classification (validated by online spot-checks) and reduce seller time-to-market by 40%.
- Applied GenAI only where it improved business workflow quality, including RAG/fine-tuned script generation for live-commerce operations, reducing script production time by around 70%.

Beijing Mijing Hefeng Technology - Huajiao Live Streaming

Scope: Owned product strategy and growth roadmap for a top live-streaming platform, covering onboarding, discovery, content ecosystem, creator productivity, interactive formats, digital-human experiments and platform operations.

- Redesigned onboarding and discovery across Channels, Nearby and Moments, integrating AI-based content distribution and improving CTR by 27% and retention by 10.3%.
- Increased onboarding conversion by 7% on iOS and 11% on Android through funnel analysis, experience optimisation and platform-specific growth experiments.
- Built creator and operation capability tools used in 13K+ daily livestreams, improving creator operational efficiency by 17% and supporting higher-quality content supply.
- Delivered the company's first digital human livestreaming product and interactive variety formats from 0 to 1, coordinating 30+ cross-functional stakeholders across product, design, engineering, operations, content and creator-facing teams.

Migu Video Technology - OTT Product Group

Scope: Co-designed user portal and content management backend for a national OTT rollout, supporting platform growth from 2M to 10M active users. Launched premium content and monetisation strategy across 3D/4K and educational products, increasing paid conversion by 23.7%.

SELECTED INDEPENDENT AI PRODUCT WORK 2024 - PRESENT	
FitCue Product judgement: reframed fitness discovery from "more workout videos" to "which workout is feasible today?", narrowing the MVP to constraint-based matching across time, space, equipment and restrictions. Designed early-stage validation through concierge testing and participant diaries.	CONSTRAINT-BASED RECOMMENDATION
Cherish Product judgement: designed an AI communication coach as a quality pipeline: situation extraction, clarification, framework mapping, generation and output filtering. Proposed QA dataset, blind testing and copy-rate as behavioural quality metrics to evaluate AI output reliability.	AI WORKFLOW QUALITY
Parallel Life Product judgement: pivoted an AI decision-support concept into an AI narrative simulation game to reduce user trust burden and regulatory risk while preserving the AI simulation engine as the product core. Defined social sharing and preregistration as early growth validation signals.	TRUST-HEAVY AI PIVOT
AI Storybook Generator Product judgement: built an end-to-end AI storybook generation pipeline covering story ideation, image generation, child-safe content constraints and HTML publishing, producing 15 interactive picture books and a commercialisation analysis for parent-facing consumer use cases.	MULTIMODAL AI CONTENT PRODUCT

AWARDS	EDUCATION
- 2024: BU E-Commerce Business Initiative Award; Baidu Xiao Zan - 2023-2024: Key Talent; Baidu Annual Performance M+ (top 10%) - 2022: Baidu Xiao Zan; Courage to Lead Award - 2018-2021: Best Partner Award; Performance Rating A+ (top 5%)	MSc, Control Science and Engineering University of Science and Technology Beijing Sep 2013 - Jan 2016 BEng, Electronic Information Technology University of Science and Technology Beijing Sep 2009 - Jun 2013
SELECTED WRITING	LANGUAGES
The Agent Singularity (2026): long-form AI systems writing on agent architecture, safety boundaries and execution constraints. Used as supporting evidence of AI depth; product experience remains the primary positioning.	Mandarin Chinese (native) English (professional working proficiency)
